KEY

DATA COLLECTION
SYSTEM

A new concept in payroll and job cost accounting

Now, the entire payroll and job-costing procedures of your company can be completely integrated in your modern data processing program with the trend-setting new 990 KDC system. Here is a revolutionary management tool, bringing to you multiple advantages in the speed, reliability and completeness of your company reports—*plus important dollar savings!* 990 KDC's unique feature—the **key encoded with employee or job number**—makes this a data collection system of unrivalled flexibility... versatility... dependability.

the 990 KDC system... what it is...what it does

The Addo-X Model 990 Key Data Collection System consists of (a) encoded keys (b) any desired number of Transmitting Stations and (c) a Central Data Console containing a paper tape punch, clock, and all operational circuitry.

Remote Transmitting stations may be conveniently located throughout a plant facility.

Each employee has his own key which is encoded with his number. A separate key is provided for job-cost applications.

The employee inserts his key in the sensor of the "IN" Transmitting Station when he reports for work, and watches for a "GO" signal. When he leaves work he repeats this procedure using the "OUT" station.

The information is transmitted to the Central Data Console where the employee number, the time, and codes for "IN" and "OUT" are automatically registered into paper tape.

some **KEY features** of the 990 KDC system...

-  Transmitting Stations installed in pairs—IN and OUT separation—to facilitate shift changes.
-  Transmitting Stations are dust and moisture protected.
-  Transmitting Stations can be expanded in number—up to 40 stations—at a nominal cost.
-  Expansion can be carried out in the field at low cost and in minimum time.
-  Registration of departmental number is an available optional feature.
-  Central Data Console under lock and key at all times, accessible only to authorized personnel.
-  The entire system built in modular, computer-type design and circuitry—for maximum system reliability.
-  The key is made of a plastic many times more wear-resistant than metal.
-  Easily accommodates from 150 to 200 employee registrations per minute.

some **KEY advantages** of the 990 KDC system...

-  Eliminates most of the manual steps that formerly went into payroll and job-costing procedures.
-  Provides complete up-to-the-minute data for management decision making.
-  Keys-in employees with greater speed and precision than ever before.
-  Represents a plus for the morale of your work force. Employees like the idea of carrying their personal key.

The 990 KDC is available through a network of branch offices and distributors throughout the United States and Canada. For additional information on the 990 KDC or other Addo-X ADP products write:
